Practical help today. Trust before a claim.

The task: If Insurance Could Do More

Create meaningful value around a real human need, beyond insurance transactions, with a credible role for If.

Our answer: a companion for life changes, practical preparation and timely help.

IF Lähellä

Help new and existing customers take a useful next step before problems become claims.

Understand

Prepare

Connect

Everyday help. Before trouble starts. · Concept prototype with fictional customer data.

Explore the interactive demo ↗

When life changes, the next step can be unclear.

Our working problem framing: three questions that practical help should answer.

01

What matters?

Which preparations, policy conditions and services relate to my situation?

02

What do I do next?

What is a useful action now, and why does it matter?

03

Where can I get help?

Which contact route fits my situation and existing cover?

New customer: prepare and explore options.

Existing customer: understand and use relevant support.

These are design hypotheses, not customer interview findings or measured improvements in trust.

Explore the interactive demo ↗

Scope: four situations, three tailored views.

One shared pattern: life context → a useful action → relevant help.

LIFE SITUATION	WHAT THE DEMO DOES	CUSTOMER PURPOSE
New home	Leak checks and a deduction example	Understand and prepare.
Away from home	Seasonal tasks and a neighbour draft	Arrange practical help.
First baby	Equipment checks and policy context	Prepare with clear limits.
Pet wellbeing	Observations and contact guidance	Find appropriate support.

New customer

Explore without assumed cover.

Existing customer

Use the selected example policies.

If staff

Review synthetic customer analytics.

Fictional records and simulated handoffs. No login, real policy changes, bookings or messages.

Explore the interactive demo ↗

Three approaches, chosen to make help tangible.

The decision, its rationale and its boundary are visible in the experience.

APPROACH	OUR DESIGN DECISION	WHY THIS MAY HELP
Understand	Show sources, policy context and what remains unknown.	Make the reasoning inspectable and the limits understandable.
Prepare	Put specific tasks beside their purpose and a proposed reward.	Offer a useful next step and make the customer benefit visible.
Connect	Show one relevant support route and prepare a usable handoff.	Make appropriate help easier to find and information easier to share.

Reactive workspace and transparent local rules. No live AI diagnosis or automated coverage decision.

Explore the interactive demo ↗

Make prevention a win for both sides.

Proposed principle: if preventive work lowers risk, share the value with the customer.

Customer value

Useful actions today.
Potentially fewer problems and
a lower price or better deal.

A sustainable role for If

Potentially lower avoidable loss costs
and a relationship built on useful help.
Both effects need validation.

Before purchase

Explore relevant preparation.

At a future quote

Validate eligible actions and
consider a better offer.

During cover

Keep guidance and benefits
relevant as life changes.

In the demo, task ticks update an illustrative estimate. Risk verification and real pricing rules are future work.

New home: clear rules and a visible benefit.

The example connects preparation, understandable limits and a proposed price reward.

PREMIUM CONCEPT · FICTIONAL ANNUAL PRICE

€600 → €540 → €513

Fictional base

Assumed 10% bundle benefit

Proposed 5% prevention benefit

Complete kitchen leak checks and floor-drain cleaning:

Live demo: €529.20 → €513.00

SEPARATE CLAIM EXAMPLE

1994 → age 32

25% deduction

Conditional leakage-repair rule. It does not establish cover or change because tasks are ticked.

2026 reference year · OMA §6.2.1.3

Rewards are proposed, not current If offers. A tick does not verify lower risk or approve a real discount.

Explore the interactive demo ↗

Let useful help demonstrate its value.

Proposal: offer a useful first contact before asking someone to consider pet cover.

CUSTOMER CONTEXT	ONE RELEVANT CONTACT ROUTE
New customer	**General veterinary contact** No policy or service entitlement assumed.
Existing customer with pet cover	**If Eläinapu 24/7 instructions** Published service; actual eligibility must be checked.
Existing customer without pet cover	**Proposed: one free 24/7 contact** One service experience; no claim payout or added cover.

Emergency signs → urgent veterinary care. No waiting for chat, trial access or insurance purchase.

24/7: chat/video at published hours, phone support otherwise. The trial is a proposal; demo contacts are simulated.

Staff insight should support a better experience.

A read-only view keeps customer context, preparation and example feedback together.

ONE FILTER · ONE CONSISTENT COHORT

3 → 1

All demo customers

With dog insurance

Policies in the cohort: 6 → 3

Where is support relevant?

Compare life situations and policy types.

Where could we learn more?

Review preparation and example feedback.

What changes with the filter?

Totals, charts and customer rows together.

Synthetic records, not pilot results. Task completion does not establish safety or satisfaction.

Explore the interactive demo ↗

Beyond the demo: assumptions to test.

A focused home-and-pet pilot would test value before a wider rollout.

01 · Evidence of prevention

A tick is not proof of lower risk.
Test proportionate evidence and whether rewards prompt additional preventive work.

02 · Sustainable rewards

Discounts and free help have a cost.
Compare loss and retention benefits with reward, service and verification costs.

03 · A dependable service

Useful help must work beyond a button.
Agree provider capacity and one-use access; keep urgent care independent of eligibility.

04 · Customer trust

Helpful guidance may still feel like selling.
Test with customers; keep advice accessible, collect minimal data and explain its use.

These are pilot proposals. Evidence, economics, service delivery and trust remain unvalidated.

Trust is the outcome we still need to test.

The demo establishes interactions; customer outcomes require a pilot.

What the demo establishes

Context and role choices change guidance.

Actions update the example calculation.

Relevant help and sources are visible.

What a pilot must establish

Do people understand the next step and its limits?

Can they find suitable help without delay?

Does useful support earn trust and lasting loyalty?

Evaluate claims costs, reward costs, verification and service costs together.

Proposed controlled pilot. Trust, retention, risk reduction and economic effects have not been measured.

Evidence and a direct route to the demo.

Explore the experience and inspect the reasoning behind the examples.
